```java
/*
 * Adds two given integers and prints the result in a fancy way.
 */
public class AddTwo {
    public static void main(String[] args) {
        int num1 = Integer.parseInt(args[0]);
        int num2 = Integer.parseInt(args[1]);

        System.out.println(num1 + " + " + num2 + " = " + (num1 + num2));
    }
}
```

```java
/*
 * Write a program that gets a quantity of cents as a command-line argument.
 * The program prints how to represent this quantity using as many quarters as possible,
plus the remainder in cents.
 */
public class Coins {
        public static void main(String[] args){
                int total = Integer.parseInt(args[0]);
                int quarters = total / 25;
                int cents = total - quarters * 25;

                System.out.println("Use " + quarters + " quarters and " + cents + " cents");
        }
}
```

```java
/*
 * Solves linear equations of the form a·x + b = c.
 * The program gets a, b, and c as command-line arguments,
 * computes x, and prints the result.
 * Treats the three arguments as well as the computed value as double values
 */
public class LinearEq {
    public static void main(String[] args){
        double a = Double.parseDouble(args[0]);
        double b = Double.parseDouble(args[1]);
        double c = Double.parseDouble(args[2]);

        System.out.println(a + " * x + " + b + " = " + c);
        System.out.println("x = " + (c-b)/a);
    }
}
```

```java
/*
 * Three sides can form a triangle if the sum of the lengths of any two sides is greater
than the length of the remaining side.
 * This is known as the Triangle Inequality Theorem.
 * Write a program that tests if three given integers form a triangle.
 */
public class Triangle {
        public static void main(String[] args){
                int a = Integer.parseInt(args[0]);
                int b = Integer.parseInt(args[1]);
                int c = Integer.parseInt(args[2]);

                //checks if each side is smaller than the sum of the other two:
                boolean isTriangle = (a + b > c) && (a + c > b) && (b + c > a);
                System.out.println(a + ", " + b + ", " + c + ": " + isTriangle);
        }
}
```

```java
/*
 * Generates three random integers, each in a given range [a,b),
 * prints them, and then prints the minimal number that was generated.
 */
public class GenThree {
        public static void main(String[] args){
                int a = Integer.parseInt(args[0]);
                int b = Integer.parseInt(args[1]);

                 int max = Math.max(a, b);
                 int min = Math.min(a, b);

                int gen1 = (int) (Math.random() * (max - min) + min);
                int gen2 = (int) (Math.random() * (max - min) + min);
                int gen3 = (int) (Math.random() * (max - min) + min);

                int minGen = Math.min(Math.min(gen1, gen2), gen3);

                System.out.println(gen1);
                System.out.println(gen2);
                System.out.println(gen3);

                System.out.println("The minimal generated number was " + minGen);
        }
}
```
